<b>Part III: Astrophysical sources of GWs</b>	<b>2</b>
<b>10 Stellar collapse</b>	<b>5</b>
10.1 Historical Supernovae	6
10.2 Properties of Supernovae	12
10.2.1 SN classification	13
10.2.2 Luminosities	18
10.2.3 Rates	20
10.3 The dynamics of core collapse	23
10.3.1 Pre-Supernova evolution	23
10.3.2 Core collapse and neutrino-driven delayed shock	27
10.3.3 The remnant of the collapse	32
10.4 GWs production by self-gravitating fluids	37
10.4.1 Energy-momentum tensor of perfect fluids	37
10.4.2 GW production from gravitating Newtonian fluids	40
10.4.3 Quadrupole radiation from axisymmetric sources	44
10.5 GWs from stellar collapse	48
10.5.1 GWs from collapse and bounce of rotating cores	49
10.5.2 GWs from bar-mode instabilities	53
10.5.3 GWs from post-bounce convective instabilities	57
10.5.4 GWs from anisotropic neutrino emission	59
10.5.5 GWs from magneto-rotational core collapse	64
10.5.6 GWs from fragmentation during collapse	67
10.6 Complements	68
10.6.1 Luminosity, color and metallicity of stars	68
Further reading	73
<b>11 Neutron stars</b>	<b>76</b>
11.1 Observations of neutron stars	76
11.1.1 The discovery of pulsars	76
11.1.2 Pulsar spindown and the $P - \dot{P}$ plane	77
11.1.3 Millisecond pulsars	82
11.1.4 Pulsar demography	83
11.1.5 SGR and Magnetars	85
11.2 GW emission from neutron stars	91
11.2.1 Neutron star normal modes	91
11.2.2 The CFS instability	101
11.2.3 GWs from post-merger NS remnants	108
11.2.4 GWs from deformed rotating NS	110
Further reading	113

<b>12 Black-hole perturbation theory</b>	<b>117</b>
12.1 Scalar perturbations	117
12.2 Gravitational perturbations	119
12.2.1 Zerilli tensor harmonics	120
12.2.2 The Regge-Wheeler gauge	125
12.2.3 Axial perturbations: Regge-Wheeler equation	129
12.2.4 Polar perturbations: Zerilli equation	132
12.2.5 Boundary conditions	133
12.2.6 The radiation field in the far zone	135
12.2.7 Summary	140
12.3 Black-hole quasi-normal modes	142
12.3.1 General discussion	142
12.3.2 Quasinormal modes from Laplace transform	146
12.3.3 Power-law tails	153
12.3.4 Frequency spectrum of quasi-normal modes	159
12.3.5 The physical interpretation of the QNM spectrum	164
12.4 Radial infall into a black hole	166
12.4.1 The source term	167
12.4.2 Numerical integration of the Zerilli equation	168
12.4.3 Waveform and energy spectrum	169
12.5 Perturbations of rotating black holes	170
12.5.1 The Kerr metric	171
12.5.2 Null tetrads and Newman-Penrose formalism	175
12.5.3 Teukolsky equation and QNMs of rotating BHs	179
12.6 Complements	182
12.1. <i>Derivation of the Zerilli equation</i>	182
12.2. <i>The source term for radial infall</i>	186
Further reading	188
<b>13 Properties of dynamical space-times</b>	<b>191</b>
13.1 The 3+1 decomposition of space-time	191
13.2 Boundary terms in the gravitational action	194
13.3 Hamiltonian formulation of GR	197
13.4 Conserved quantities for isolated systems	199
13.4.1 Asymptotic flatness	199
13.4.2 ADM mass	200
13.4.3 ADM momentum and angular momentum	205
13.4.4 Mass and angular momentum of isolated BH horizons	206
13.4.5 Irreducible BH mass	209
13.5 GWs and Newman-Penrose scalar	209
Further reading	211
<b>14 GWs from coalescing compact binaries. Theory</b>	<b>212</b>
14.1 Non-perturbative resummations. A simple example	214
14.2 Effective one-body action	219
14.2.1 Equivalence with a one-body problem	219
14.2.2 Conservative dynamics	229

14.2.3	Inclusion of radiation reaction	232
14.2.4	The EOB waveform	233
14.2.5	Spinning binaries	238
14.3	Numerical relativity	243
14.3.1	Numerical integration of Einstein equations	243
14.3.2	Equal-mass non-spinning BH binaries	246
14.3.3	Unequal-mass non-spinning BH binaries	250
14.3.4	Final BH recoil	252
14.3.5	Spinning black holes and superkicks	254
14.3.6	Astrophysical consequences of BH recoil	262
14.3.7	Coalescence of neutron-star binaries	267
	Further reading	270
<b>15</b>	<b>GWs from coalescing compact binaries. Observations</b>	<b>273</b>
15.1	GW150914. The first direct detection	273
15.2	Evaluation of the statistical significance	275
15.3	Properties of GW150914	281
15.4	GW151226: the second detection	285
15.5	Astrophysical and theoretical implications	289
15.5.1	Astrophysical implications	289
15.5.2	Tests of fundamental physics	291
	Further reading	296
<b>16</b>	<b>Supermassive Black Holes</b>	<b>299</b>
16.1	The central supermassive black hole in our Galaxy	299
16.2	Supermassive black-hole binaries	302
16.2.1	Formation and evolution of SMBH binaries	302
16.2.2	SMBH binaries at LISA	306
16.3	Extreme mass ratio inspirals	311
16.3.1	Formation mechanisms	311
16.3.2	EMRIs at LISA	313
16.3.3	Waveforms and the self-force approach	315
16.4	Stochastic GWs from SMBH binaries	321
16.4.1	Sum over cosmological sources	321
16.4.2	Regime dominated by GW back-reaction	323
16.4.3	Regime dominated by three-body interactions	324
16.4.4	High-frequency regime and source discreteness	327
16.4.5	Estimates of the SMBH merger rate	329
16.4.6	Effect of the eccentricity	331
	Further reading	335
<b>Part IV:</b>	<b>Cosmology and Gravitational Waves</b>	<b>338</b>
<b>17</b>	<b>Basics of FRW cosmology</b>	<b>339</b>
17.1	The FRW metric	339
17.1.1	Comoving and physical coordinates	340
17.1.2	Comoving and physical momenta	341
17.2	Cosmological background equations for single fluid	344

17.3	Multi-component fluids	347
17.4	RD-MD equilibrium, recombination and decoupling	351
17.5	Effective number of relativistic species	353
17.6	Conformal time and particle horizon	358
17.6.1	Radiation dominance	359
17.6.2	Matter dominance	361
17.6.3	Analytic formulas in RD+MD	362
17.6.4	$\Lambda$ dominance	363
17.6.5	Conformal time at significant epochs	363
17.6.6	Comoving distance, angular diameter distance and luminosity distance	365
17.7	Newtonian cosmology inside the horizon	367
17.7.1	Newtonian dynamics in expanding backgrounds	368
17.7.2	Friedmann equation from Newtonian dynamics	369
17.7.3	Evolution of the peculiar velocity	371
17.7.4	Newtonian fluid dynamics in an expanding Universe	372
	Further reading	381
<b>18</b>	<b>Helicity decomposition of the metric perturbations</b>	<b>382</b>
18.1	Perturbations over flat space	383
18.1.1	Helicity decomposition	383
18.1.2	Radiative and non-radiative degrees of freedom	388
18.2	Gauge invariance and helicity decomposition in FRW	391
18.2.1	Linearized diffeomorphisms and gauge invariance in curved background	391
18.2.2	Bardeen variables	392
18.3	Perturbed energy-momentum tensor	395
18.3.1	General decomposition of $T_\nu^\mu$	396
18.3.2	Perturbations of perfect fluids	398
18.3.3	Linearized energy-momentum conservation	401
18.3.4	Gauge-invariant combinations	404
	Further reading	406
<b>19</b>	<b>Evolution of cosmological perturbations</b>	<b>407</b>
19.1	Evolution equations in the scalar sector	407
19.1.1	Single-component fluid	409
19.1.2	Multi-component fluid	411
19.1.3	Super-horizon and sub-horizon regimes	413
19.2	Initial conditions	417
19.2.1	Adiabatic and isocurvature perturbations	419
19.2.2	The variables $\zeta$ and $\mathcal{R}$	421
19.3	Solutions of the equations for scalar perturbations	424
19.3.1	Numerical integration	424
19.3.2	Analytic solutions in RD	428
19.3.3	Analytic solutions in MD	431
19.3.4	Analytic solutions during dark-energy dominance	433
19.4	Power spectra for scalar perturbations	434

19.4.1	Definitions and conventions	434
19.4.2	The primordial power spectrum	436
19.4.3	Transfer function and growth rate	438
19.4.4	The linearly processed power spectrum	441
19.5	Tensor perturbations	443
19.5.1	Evolution during RD, MD and $\Lambda$ D	444
19.5.2	Transfer function for tensor modes	451
19.5.3	GW damping from neutrino free-streaming	455
19.5.4	The tensor power spectrum, $\Omega_{\text{gw}}(f)$ and $h_c(f)$	457
	Further reading	460
<b>20</b>	<b>The imprint of GWs on the CMB</b>	<b>461</b>
20.1	The CMB multipoles	461
20.2	Null geodesics	466
20.3	Temperature anisotropies at large angles	470
20.3.1	Photon geodesics in a perturbed FRW metric	471
20.3.2	Sachs-Wolfe, ISW and Doppler contributions	473
20.3.3	Expression of the $C_l$ in terms of $\Theta_l(k)$	477
20.3.4	Scalar contribution to the $C_l$	480
20.3.5	Tensor contribution to the $C_l$	484
20.3.6	Finite thickness of the LSS surface	492
20.3.7	The Boltzmann equation for photons	494
20.4	CMB polarization	499
20.4.1	Stokes parameters	499
20.4.2	Polarization maps. $E$ and $B$ modes	502
20.4.3	Polarization and tensor spherical harmonics	505
20.4.4	Generation of CMB polarization	512
20.4.5	Experimental situation	523
	Further reading	525
<b>21</b>	<b>Inflation and primordial perturbations</b>	<b>528</b>
21.1	Inflationary cosmology	528
21.1.1	The flatness problem	528
21.1.2	The horizon problem	532
21.1.3	Single-field slow-roll inflation	534
21.1.4	Large-field and small-field inflation	538
21.1.5	Starobinsky model	544
21.2	Quantum fields in curved space	548
21.2.1	Field quantization in curved space	549
21.2.2	Quantum fields in a FRW background	554
21.2.3	Vacuum fluctuations in de Sitter inflation	557
21.3	Primordial perturbations in single-field slow-roll inflation	563
21.3.1	Mukhanov-Sasaki equation	564
21.3.2	Scalar perturbations to lowest order in slow-roll	567
21.3.3	Scalar perturbations to first order. Spectral tilt	568
21.3.4	Tensor perturbations	573
21.3.5	Predictions from a sample of inflationary models	578
21.3.6	The relic inflationary GW background today	583

21.3.7	A full quantum computation of $\Omega_{\text{gw}}$	590
	Further reading	595
<b>22</b>	<b>Stochastic backgrounds of cosmological origin</b>	<b>597</b>
22.1	Characteristic frequency of relic GWs	597
22.2	GW production by classical fields	600
22.2.1	General formalism	600
22.2.2	GW generation by a stochastic scalar field	604
22.3	GWs from preheating after inflation	606
22.3.1	Parametric resonance in single-field inflation	606
22.3.2	Tachyonic preheating in hybrid inflation	609
22.4	GWs from first-order phase transitions	610
22.4.1	Crossovers and phase transitions	610
22.4.2	First-order phase transitions in cosmology	614
22.4.3	Thermal tunneling theory	616
22.4.4	Bubble dynamics and GW production	628
22.5	Cosmic strings	637
22.5.1	Global and local strings	637
22.5.2	Effective description and Nambu-Goto action	641
22.5.3	String dynamics. Cusps and kinks	645
22.5.4	Gravitational radiation from cosmic strings	650
22.6	Alternatives to inflation	658
22.7	Bounds on primordial GW backgrounds	663
22.7.1	The nucleosynthesis bound	663
22.7.2	Bounds on extra radiation from CMB	669
22.7.3	Bounds from CMB at large angles	671
22.7.4	Limits on stochastic backgrounds from interferometers	672
	Further reading	673
<b>23</b>	<b>Stochastic backgrounds and pulsar timing arrays</b>	<b>676</b>
23.1	GW effect on the timing of a single pulsar	677
23.2	Response to a continuous signal	681
23.3	Response to a stochastic GW background	683
23.4	Extracting the GW signal from noise	686
23.5	Searches of stochastic backgrounds with PTA	693
	Further reading	695
	<b>Bibliography</b>	<b>697</b>
	<b>Index</b>	<b>736</b>
